                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolyvic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, Guillain-Barre syndrome and chronic inflammatory demyelinating polyneuropiaty. This sequence represents a human PRO polynucleotide of

```
The present sequence is the coding sequence for human dipeptidyl-

CC peptidase IV (DPP4). The invention relates to novel disease associations

CC DPP4 polypeptides and polynuclectides and to novel methods of

CC screening for therapeutic agents for the treatment of cardiovascular

CC disorders, dermatological disorders, cancer, hematological disorders,

CC disorders and metabolic diseases. Pharmaceutical compositions are

CC disorders and metabolic diseases. Pharmaceutical compositions are

CC provided for treatment of these diseases and disorders and comprise a

CC modulators of DPP4 activity. The therapeutic agent is preferably a small

CC module, an RNA molecule, an antisense oligonuclectide, a polypeptide,

an antibody or a ribozyme. The invention also provides methods of

CC diagnosing diseases and disorders associated with DPP4 by measuring the

CC amount of a DPP4 polynuclectide in a sample and comparing it with the

amount of a DPP4 polynuclectide in a sample and comparing it with the

amount in a sample from a healthy and/or diseased mammal. The disease

CC and disorders include Parkinson's disease, dementia, Alzheimer's disease,

CC disorders, leukemia, panoreattis, Crohn's disease, inflammatory bowel

CC disease, diabetes, Cushing's syndrome, systemic lupus erythematosus,

CC material infare.

                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to nucleic acids and proteins (ADN38683-ADN40064) whose expression is upregulated or downregulated in specific cancers or other diseases such as anglogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a nucleic acid of the invention; antibodies which specifically bind a polypeptide of the invention; antibodies for drug targeting; and methods of screening for modulators of acitivity or expression of the polypeptides and mucleic acids. The nucleic acids, polypeptides, antibodies and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, attendance and activation syndromes, activation diseases, retinal neovascularistation syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting a nucleic acid in a biological sample.

The invention relates to a novel crystal of a dipeptidyl peptidase IV (PPPIV) which is sufficient to ensure a resolution capable of analysing its three-dimensional structure up to the side chain level by X-ray crystallographic structural analysis. The crystal of the invention demonstrates immunomodulatory, antidiabetic, antidifiammatory, neuroprotective, antithyroid, antitheumatic, antiarthritic, anti-HIV and cytostatic activities and may be useful for providing a three-dimensional structural coordinate as the information for designing, identifying, evaluating or searching for an effector of the dipeptidyl peptidase IV. The effector may be useful as a modulatory agent of immune response and as a thraspeutic or prophylactic agent for diabetes, inflammation, multiple sclerosis, Grave's disease, chronic rheumatoid arthritis, AIDS or cancer. The current sequence is that of the human full-length colon dipeptidyl peptidase IV (DPPIV) DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1. .2301

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  234
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a new microarray which comprises probes for genes involved in psychoneuroendocrinimmune (PNI) activity. The microarray is useful in diagnosing a condition associated with PNI activity, such as CFS, type-2 diabetes, allergic condition, inflammation, cancer and infection. The present sequence represents a psychoneuroendocrinimmune gene expressed sequence tag. Note the specificatio mentions SEQ ID NO of up to 3314 but only sequences up to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      174

chemotherapeutic or radiocherapeutic agents, is used for the treatment and prevention of cancers. Expression of CD26 enhances the sensitivity of the cancer cell to the chemotherapeutic or radiotherapeutic agent. CD26 is a dipeptidyl peptidase IV (DPPIV). The chemotherapeutic agent is CD26 is a dipeptidyl peptidase IV (DPPIV). The chemotherapeutic agent is CD26 topolsomerase II inhibitor. The CD26 composition of the invention is useful for inhibiting the growth of a cell, inducing cell cycle arrest in a cell, killing a cancer cell, potentiating the effect of a chemotherapeutic agent and/or a radiotherapeutic agent on a tumour cell, inducing or enhancing apoptosis of a cancer cell, treating cancer, or inducing or enhancing apoptosis of a cancer cell, treating cancer, or inducing or enhancing apoptosis of cancer cell, treating cancer, or inducing an entigen-presenting topolsomerase II expression in a cell, for activating an antigen-presenting cell, or for potentiating immune responses of an animal. The present sequence encodes a CD26 protein, and is used to create vectors which are used to produce compositions of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           199
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   259
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          319

The present invention describes a method of testing for bronchial asthma or chronic obstructive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial colles are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial colls are stimulated with interleukin-13. Also described: (1) a reagent (1) for cesting for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent (C to treat bronchial asthma or chronic obstructive pulmonary disease; (5) a marken gene or an inmal model for bronchial asthma or chronic obstructive pulmonary disease; (5) a method for producing an animal model for bronchial asthma or chronic obstructive pulmonary disease; (5) a marker gene or an antisense mucleic acid corresponding to a portion of the marker gene, a tibozyme, a polynucleotide that suppresses the correspond by a marker gene; and (7) a DNA chip for testing for expression of the gene through an RNA effect or an antibody recognising a protein encoded by a marker gene; and (7) a DNA chip for testing for creating for a cremening for a pherapeutic agent for probe has been immobilised to assay a marker gene. (1) has respiratory and antiasthmatic activities, and can be used in gene therapy. The method is useful for resting for a cremening for a properser. The present
                                                                                                                                                                                                                                                                                                                                                                                                                      ፩
                                                                                                                                                                                                                                                                                                                                                                                                                  Testing for bronchial asthma or chronic obstructive pulmonary disease by comparing the expression level of a marker gene in a biological sample from a subject with the expression level of the gene in a sample from a healthy subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      bronchial asthma or chronic obstructive pulmonary disease. The present sequence is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogram's syndrome, vasculitis, sarcoidosis, autoimmune thaemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating diseases of the Guillain-Barre syndrome and chronic inflammatory demyelinating polyneuropathy. This sequence represents a human PRO polynucleotide of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AACTACGTGAAGCAATGGAGGCATTCCTACACAGCTTCATGATGATTTAAGATTAAAT

```
The specification describes a CD26 composition which, in conjunction with chemotherapeutic or radiotherapeutic agents, is used for the treatment and prevention of cancers. Expression of CD26 enhances the sensitivity of the cancer cell to the chemotherapeutic or radiotherapeutic agent. CD26 is a dipeptidyl peptidase IV (DPPIV). The chemotherapeutic agent is a copoisonerase II inhibitor. The CD26 composition of the invention is useful for inhibiting the growth of a cell, inducing cell cycle arrest in a cell, killing a cancer cell, potentiating the effect of a chemotherapeutic agent and/or a radiotherapeutic agent on a tumour cell, inducing or enhancing apoptosis of a cancer cell, treating cancer, or inducing tumour regression or tumour necrosis. The CD26 composition is further useful for increasing topoisomerase II expression in a cell, for activating an antigen-presenting cell, or for potentiating immune response of an animal. The present sequence encodes a CD26 protein, and is useful.
                                                                                                                                                                                                                                                                                                                                                                                      Use of a CD26 composition, and a chemotherapeutic and/or a radiotherapeutic agent for e.g. inhibiting the cell growth, inducing celcycle arrest, killing a cancer cell, treating cancer, or inducing tumor regression or tumor necrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 3445 BP; 1085 A; 689 C; 721 G; 950 T; 0 U; 0 Other;
